Relay Docs

BIOS 2026 · FRONTIER track · Problem 09

A doc editor that works with no internet.

Saved on your device. No account, no server.

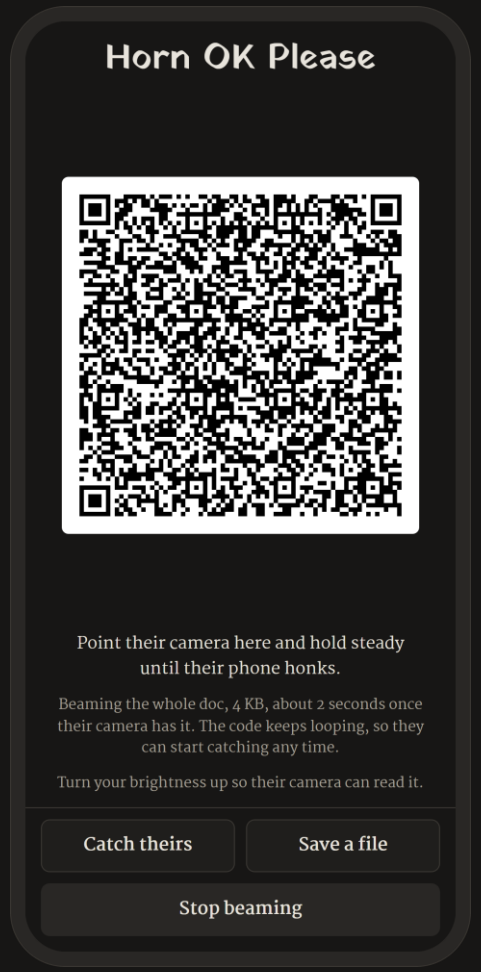

Write, close, reload. It’s all still here.

Headings, checklists, tables, links, undo: what you’d expect from a doc.

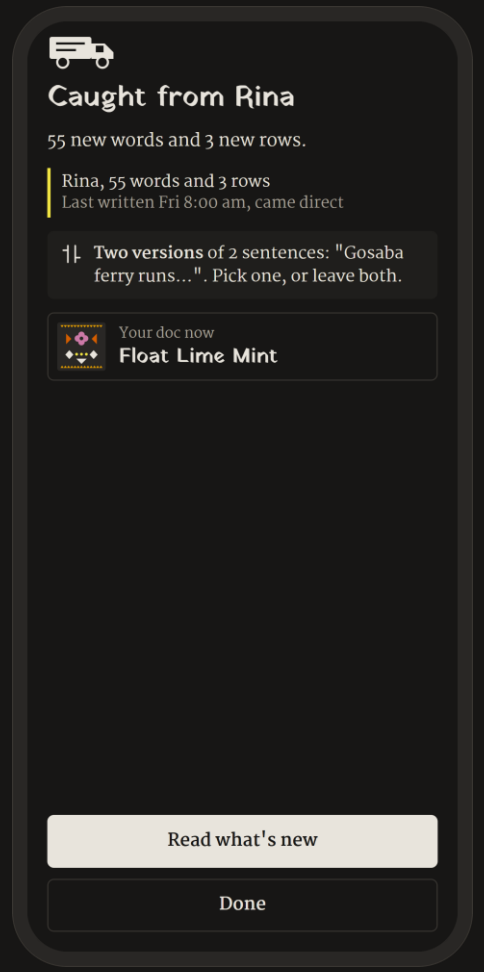

Devices swap the doc when they meet

One shows a moving code. The other's camera catches it.

No internet, no Wi-Fi. A small file on a pen drive works too.

Beam

Catch

Meet in any order. End on the same doc.

Rina → Asif → Tanmoy

Tanmoy → Rina → Asif

Asif → Tanmoy → Rina

Three people, three orders

Bird Autumn Bamboo

Same truck back on every device means the same doc.

Relief happens where the signal isn't

9,226 people

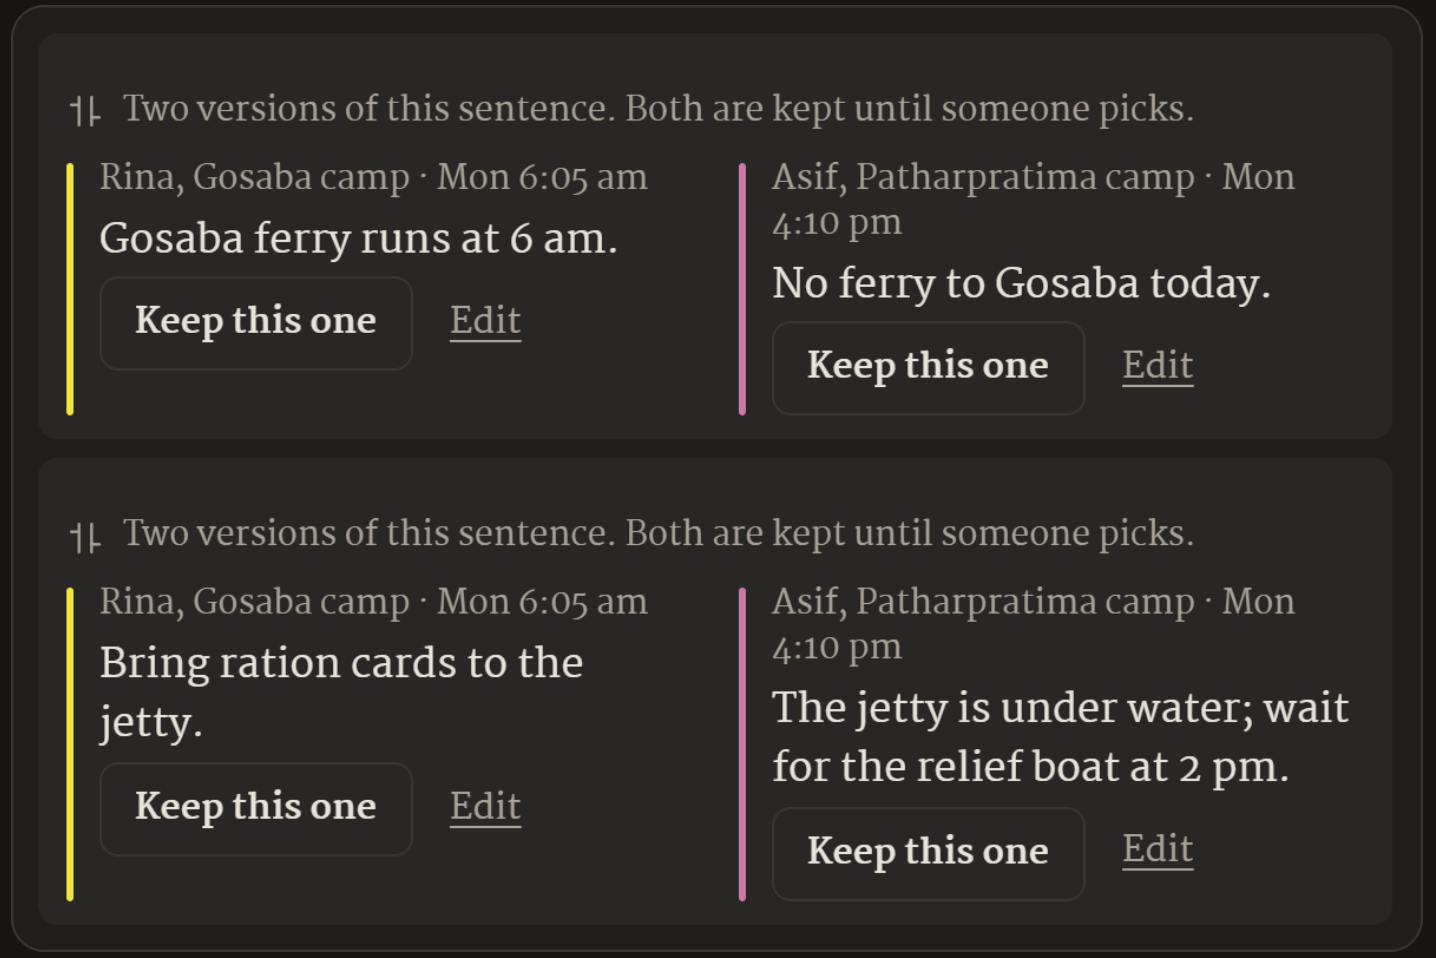

were paid house grants twice after Cyclone Amphan: 18 crore rupees. Every camp's list was fine on its own.

About 10,000

Indian villages have no mobile signal at all.

Sources: The Federal, on the government auditors' report on Amphan relief · Free Press Journal, on mobile coverage

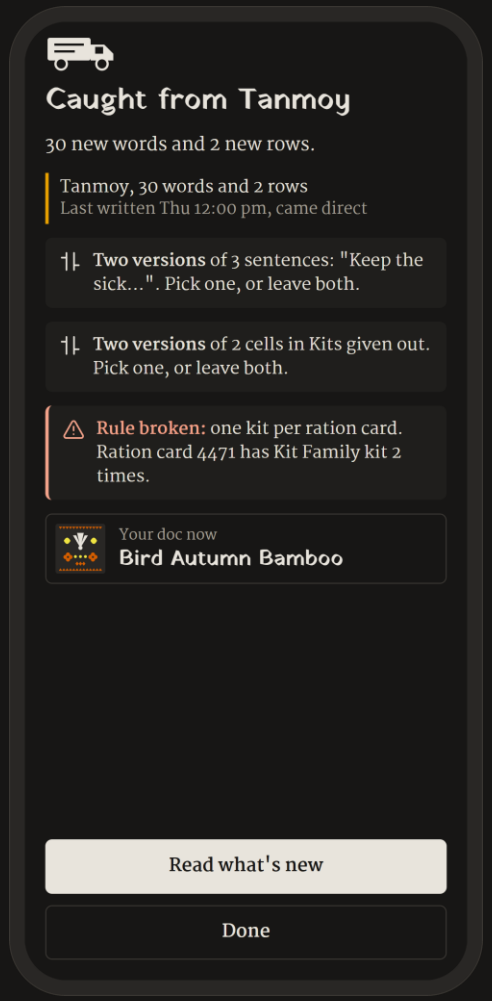

Both versions are kept

Rina and Asif changed the same sentence without seeing each other's change.

A normal sync keeps whichever arrived last, and families walk to a flooded jetty.

The Amphan mistake, caught

Rules written inside the doc, like one kit per ration card, are checked the same way on every device, whatever order they synced in.

Ration card 4471: a kit at Gosaba on Monday, another at Basanti on Tuesday.

4471	Family kit	Gosaba	Mon
4471	Family kit	Basanti	Tue

Shuffled a thousand times. Same doc.

Bird Autumn Bamboo 66

1,000 of 1,000 the same

1,000 shuffled orders, all the same truck back. Each time every change was rebuilt, clashes, picks and rules included.

And a 20,000-change doc opens in about 0.2 seconds on this laptop.

Any doc, any order, no signal.

Relay Docs

The team

ranvir7123.github.io/phir-milenge

Open it once with internet.
After that it works offline.
